

# Hacking - 2019 Style Workshop

## Course 90901 – 8 Hours

### Overview

The hacking world has taken some major steps during the last couple of years, both in domains and in techniques. This quick hands on seminar will give you a high level experience of some of the new and most exciting hacking techniques. We'll demonstrate Web based attacks, some more client related attacks and some infrastructure related ones.

The aim of this seminar is not to make you a hacker, rather to show, first hand, how easy it is today to execute advanced hacking techniques.

### Who Should Attend

- IT Managers

### Prerequisites

Relevant audience for this seminar are people with at least a couple of years' hands-on experience in system and networking.

Experience with pentesting would help a lot though it's not a must.

### Course Contents

- Cyber Warfare
- Recon
- Attack Vectors
- Scanning
- World Attacks
- Cyber Automations
- Bind vs Reverse
- Post-Exploitation
